Art Unit: 3744

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2, 5, 8, 9 and 22 are rejected under 35 U.S.C. 102(b) as being anticipated by Kobayashi et al. Kobayashi discloses a thermostat 14, indoor controller 101, 104 and outdoor controller 17 connected by a serial data bus 106 in which the indoor controller is directly wired to a damper control 9A to provide a heating function to air within an environment.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 4, 10-11, 16-17 and 19-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kobayashi et al. Kobayashi discloses the invention substantially as claimed. Kobayashi discloses two wires for providing power to the indoor and outdoor controllers and two wires for providing data between the indoor controller, outdoor controller and thermostat (see col. 5, line 63 to col. 6, line 2). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the system of Kobayashi such that four wires were used to connect all the controllers of the system rather that just some of the controllers since the concept of using four wires interconnecting some of the controllers is clearly shown on Figure 6.

The provision of the four wires as distinct and separate wires is considered to have been an obvious matter of engineering design based upon the particular installation since the operation of the data bus will not be substantially changed.

Claims 3 and 12-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kobayashi et al as applied to claim 4 above, and further in view of Otsuka et al.

Otsuka teaches the provision of peripheral HVAC units such as humidifier in combination with a heat source device (see col. 9, lines 41-45). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the system of Kobayashi such that it included the provision of peripheral HVAC units such as humidifier in combination with a heat source device in view of the teachings of Otsuka.

Claims 6 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kobayashi as applied to claim 4 above, and further in view of Munson et al. Munson teaches the provision of an interface adapter for interfacing a remote controller to an environmental control system. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the system of Kobayashi such that it included the use of an interface adapter for interfacing a remote controller to the control system in view of the teachings of Munson.

Claims 7 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kobayashi as applied to claim 4 above, and further in view of Jurewicz et al. Jurewicz teaches the use of a serial communication bus to connect remoter sensors to a control system (see col. 3, lines 23-36). It would have been obvious to one of ordinary skill in

the art at the time the invention was made to have modified the system of Kobayashi such that it included the use of the serial communication bus to connect remoter sensors to a control system in view of the teachings of Jurewicz.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Harry B. Tanner whose telephone number is (571) 272-4813. The examiner can normally be reached 8:30 am to 5:00 pm Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cheryl Tyler, can be reached on (571) 272-4834. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://portal.uspto.gov/external/portal/pair. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
